

Face paints and aloe based glitter can be removed easily with just unscented\* baby wipes OR soap, water, and a soft sponge or cloth. Always start by coating the skin with a thin layer of soap. Once you have worked the soap into the face paint, proceed to rinse, keeping eyes protected. Always make sure to be gentle, excessive rubbing of your skin can cause irritation. If any stains are left on the skin, consider using lotion, mineral oil, or coconut oil. In the rare case in which a stain is still visible after this process, please wait for 24 hours before attempting to wash off the area again.

Glitter tattoos will last 3-10 days. For easy removal, soak the tattoo in mineral or coconut oil, and gently rub with a soft cloth. Repeat as needed, being careful not to irritate skin with excessive rubbing.

Black ProAiir ink tattoos will last 3-7 days. For easy removal, simply rub with isopropyl alcohol, then clean with soap and warm water.

\*Do not use scented baby wipes as fragrance can react with paint and cause allergic reactions.
